RESEARCH PROJECTS

Active

- 2024-current **Co-investigator.** Development of an early screening tool for pain and mental health for young Canadian women with endometriosis. CIHR NWHRI Innovation Fund 2024. Di Renna T, Magali R, Solnik M, Leonardi M, Laur C, Lau B, Boerner K, Rosenbloom B, Bosma R, Luciani K, Wolfson L, Radhakrishnan A, Bridge-Cook P.
- 2019-present Genetic Analysis of Leiomyosarcoma
Collaborator. Comprehensive genomic landscapes of uterine leiomyosarcoma compared to leiomyomas to identify biomarkers for patient stratification. PI: Rebecca Gladdy, Collaborators: Marjan Rouzbahman, Adam Shlien. In progress. Abstract accepted at Connective Tissue Oncology Symposium (CTOS) Annual Meeting 2024.

Completed

- 2018-2023 Adnexal Mass Scoring
Co-Investigator. Collaboration with Joint Division of Medical Imaging at the University Health Network and Gynaecologic Oncology in review of women undergoing adnexal surgery for both benign and malignant disorders to better identify ultrasonographic criteria specific to reproductive malignancy. PI: Mostafa Atri. REB approved. Data analysis completed. Presenting at RSNA and AAGL 2023. Submitted for publication, under review.
- 2020-2022 Delaying Elective Surgery during COVID Pandemic
Co-Investigator. During the Covid pandemic we will be communicating with our patients using a Virtual Gynecology Portal. With this portal patients will be completing disease specific validated and general quality of life measures. This portal also allows the patients to contact their care team. Through the clinical measures delivered through this portal we would like to study the impact of delaying elective gynecologic procedures on patients' disease severity, progression and quality of life. PI: Ally Murji, Co-PI: Siddhi Mathur. REB approved.
- 2019 **Co-Investigator.** Post-Operative Voiding After Gynecological Surgery (POVAGS) trial: a randomized controlled trial on retrograde bladder filling after outpatient gynaecological laparoscopy. PI: Andrew Zakhari, MD. Published JMIG 2020
- 2019 **Co-Investigator.** Essentials in Minimally Invasive Gynecology (EMIG) Manual Skills Pilot Validation. PI: Malcolm Munro, MD. Published: J Minim Invasive Gynecol 2019
- 2018-2019 **Co-Investigator.** Returning to Work After Minimally Invasive Hysterectomy. A Retrospective trial to establish data prior to initiating a prospective analysis to determine how long patients undergoing elective minimally invasive hysterectomy require before returning to work. PI: Ari Sanders, MD. Published: Non-funded. Published, JOGC 2019.

2017-2019	Co-Investigator. Bayer 15789 Study: A randomized, parallel-group, double-blind, double-dummy, active-controlled, multicenter study to assess the efficacy and safety of vilaprisan in subjects with uterine fibroids. Industry funded. Study completed.
2017-2019	Co-Investigator. Abbvie Clinical Study – Compound Elagolix (AB-620): Phase 3 Trial for management of endometriosis. Industry funded. Study Completed
2015-2018	Co-Investigator. CAPTURE Study: CMO-CAN-WH-0412. Multicenter prospective non-interventional study assessing the management of Canadian women with uterine fibroids, a patient registry. Site collaborator. Industry funded. Study Completed.
2015-2018	Collaborator. Development of an Educational Tool Using Qualitative Analysis to Teach Components of Total Laparoscopic Hysterectomy. Site PI. Non-funded. Completed.
2015	Collaborator. Multi-center FDA Trial: Evaluation of the Gynesonics System for Transcervical Treatment of Symptomatic Uterine Fibroids with Radiofrequency Ablation under Integrated Intrauterine Sonography Guidance: an FDA Pivotal Trial. IRB approved at Cedars-Sinai Medical Center, Los Angeles, CA – discontinued due to transition to Canada.
2013-2015	Co-Investigator. Vasopressin Administration During Laparoscopic Myomectomy, A Randomized Controlled Trial, Cedars-Sinai Medical Center, Los Angeles, CA, USA. Collaborators: Jon Einarsson, MD, Sangeeta Senapati, MD, Hye-Chen Hur, MD. Site PI. Published BJOG 2016.

Comment: While I am not principal or senior author for this publication, it represents our divisional work in collaboration with international colleagues (Italy) and my mentorship of Drs. Zakhari and Lemos. Our goal was

to publish an easily digestible, practical tool for an international readership – enabling surgeons to better understand pelvic neuroanatomy and avoid inadvertent injury.

Comment: This publication is noteworthy in that it represents the culmination of several years of contribution towards the development of a valid assessment tool for knowledge and skillsets specific to gynecologists. I was invited to participate from the initial concept of EMIGS, through design of the international randomized validation trial – for which I was a site principal investigator. This publication describes the findings from the validation trial.

Comment: We wanted to have a better understanding of how patients recover and what factors contribute to their ability to return to work after laparoscopic hysterectomy. There is limited population-based data in the U.S. and no Canadian data to help provide gynecologists guidance on this aspect of surgical counseling. A historical reference point for return to work is 6 weeks, but based on these findings, although a small pool of patients, patients are capable of return sooner. This may have larger scale implications especially with regards to the Canadian workforce.

Comment: This multi-site randomized trial was borne from discussions from the AAGL Research Committee, to demonstrate the capacity for investigator-initiated research within the organization. Each site contributed towards different aspects of the study, whether through biostatistical support or data management. No study prior to this effectively addressed the need for a recommended concentration of vasopressin at time of surgery for uterine fibroids. In a sense, this was an early version of an AAGL network publication

Comment: This is a highly cited publication that resulted from a collaborative effort of subject matter experts on tissue extraction in gynecologic surgery. Following an FDA advisory regarding electromechanical morcellators, institutions and surgeons were faced with making a critical decision regarding procurement of these commonly used. I was invited to participate in an international society working group that performed a systematic literature review and subsequent publication intended to guide surgeons with decisions in the short-term following the FDA advisory.
